## FEATURES

- Maintain constant bath temperature
- Automatic reset for perfect temperature control
- Pre-plumbed for easy installation and serviceability
- Plugs into standard 120V outlet
- Energy efficient

## Luxury

Mixing air and water in a jetted bath causes the water to cool 75% faster than in a traditional bathtub. But, a bath with a PermaHeat™ heater eliminates the rapid cooling of the water by providing a constant temperature – between 102° F and 104° F – for a longer, more luxurious, and more enjoyable bath.

## Automatic Reset

Only PermaHeat™ features the automatic reset for perfect temperature control without having to locate and reset the unit itself under the tub. Installation of a PermaHeat™ bath heater couldn't be simpler and is perfect for both new installations as well as a retrofit.
